

Product overview

We provide solutions to the packaging industry in terms of adhesives, coatings, inks & specialty paper. We also provide certified chemicals for the textile industry in terms of binders, rheology modifiers, crosslinkers, etc.

PACKAGING

Water based lamination adhesives

Heat seal coatings	Paper to paper, paper to PVC, PET, lidding
Barrier coatings	WVTR and OTR coating
OGR coatings	Sealable and non-sealable
Inks	Water-based, UV, LED
Gloss coatings	UV, LED, solvent-based
Cold seal coating	

TEXTILES

Textile chemicals	Binders, rheology modifiers, crosslinkers
-------------------	---

RECYCLING PLASTICS

Multilayer plastics are generally burnt in kilns and/or downcycled. We provide a solution to upcycle multilayer plastics with advanced recycling technology. We separate the laminated layers; de-ink, de-metallize and de-odorize them; and segregate polyolefins from PET, nylon and aluminium foil. All these fractions are then converted to granules to reuse them in making similar types of films.

We not only provide the technology but also set up the complete plant with our plant designing and erection team.
